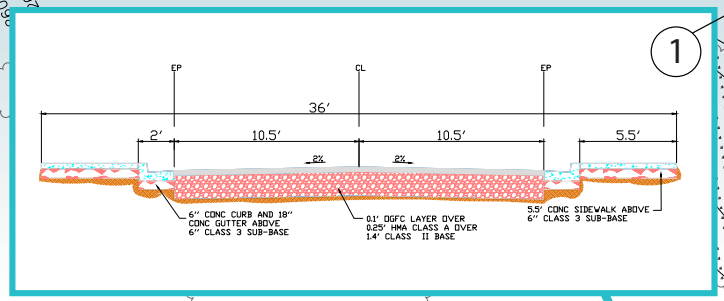
Johnson Avenue Housing Project

SLO Design Consultants

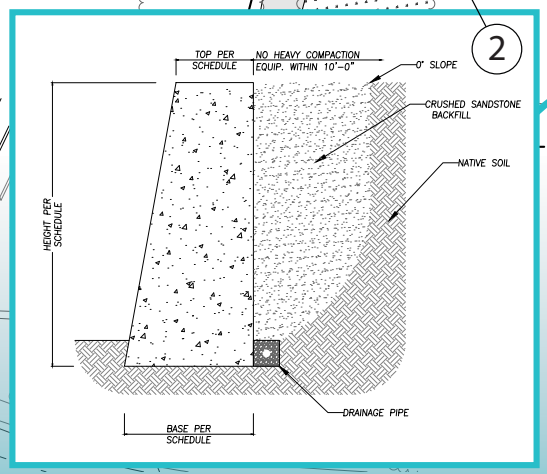
Road Cross-Section

A typical cross-section for the main road running from STA 40+00' to STA 42+99.51', crowened with 2% cross slope.



Retaining Wall

An 8' concrete gravity retaining wall placed behind the residential units allows for an even pad elevation on the steeply sloped site.



Parking Garage

The subterranean parking garage is designed for an occupancy of 70 vehicles. It is supported by a combination of 44 shallow and deep foundations.
